

Double lane installation at Midland International Air & Space Port  
Midland, TX

## Automated Exit Lane Breach Control

dormakaba's Exit Lane Breach Control (ELBC) corridor offers controlled access and secured one-way pedestrian flow. Passengers pass through several automated door sets while the system monitors flow through multiple sensors and video analytic surveillance.

- Provides a physical barrier and advanced sensor technology
- No need for a security guard
- Customizable through different unit lengths and sensor combinations

Logan International Airport  
Boston, MA

## Self-Boarding Gates

dormakaba is the international market leader for Self-Boarding Gates. Quick, efficient and secure boarding is important – without sacrificing safety or passenger experience.

- Support ground personnel with quick, precise, and user-friendly functions.
- Boarding passes and passengers are securely linked using biometric verification
- Passenger use is hands free - simply look into a camera for quick and easy boarding
- Allows airport personnel to focus on passenger care

Personal Interlock installed at Aéroport international Jean-Lesage de Québec -  
Quebec City, QC Canada

## Personal Interlocks

High security is not just verifying user authorization to enter restricted areas. Controlling that access is equally important. Single entrance monitoring is achieved by badging into the interlock, then badging or biometric scanning to open the second door.

- Meets the highest security demands and provide optimal protection for your airport, personnel, and passengers
- Multiple configurations are available to meet your specific access control needs
