dormakaba Anti-Ligature Thumbturn
Combining Safety & Security

Features:

- Tested independently to DHF TS0001 specification making the dormakaba anti-ligature thumbturn Grade 4 for safety and Grade 2 corrosion resistant.
- Rounded thumbturn shape to reduce ligature points
- Secure bolt through fixings provide strength and resistance in abusive environments.
- Clutch mechanism provides key override functionality at all times
- The square drive slides inside the anti-ligature knob providing automatic adjustment for 44mm and 54mm doors
- Unique ‘stop’ mechanism ensures key can be freely inserted and turned should the knob be held from within (dormakaba cylinders only)
- Unique staff safety feature, in duress situations the internal knob is disabled by insertion of key until assistance arrives.
- The anti-ligature thumbturn and cylinder should be checked for correct functionality with the intended lockcase before specifying this product.

Areas of Application:
- Secure detention centres
- Hospitals
- Care facilities
