

Case Study

Checkmate Devices Ltd was established in the United Kingdom in 1962. They design, manufacture and supply a wide range of safes for use in vehicles. Called "Travel Safes" they offer front line anti snatch protection to client's cash and valuables together with reducing the risk of personal attack to their drivers. The travel safes are available in many different sizes and are very easily fitted into almost any type of vehicle.

dormakaba became associated with Checkmate Devices when they approached us for information on our key systems. We were delighted to be chosen to supply Checkmate Devices with a dormakaba key system for their range of vehicle safes. The patented, registered master key system Kaba 20 was chosen due to its

flexibility, reliability and high security features.

The patented, registered master key system Kaba 20 was chosen due to its flexibility, reliability and high security features. Each safe clearly has printed on it "KEY AT DEPOT ONLY" thus deterring opportunist attackers, as the driver does not hold the key.

Debbie Tiltman says **"Checkmate and our customers have always been impressed with the level of quality and security that the Kaba 20 system has provided, which is obviously our main concern, our Travel Safes need both a well manufactured safe with a high security lock, which we feel we have been providing over the years."**
