

## Keyless ATM Management System

Control authorised access to ATMs

With the Keyless ATM Management System, the risk of unauthorised access to ATMs is reduced.

- The dedicated app is secured by individual log-in credentials, as well as geo-location authentication. Biometrics and facial recognition, available on request.
- Integration into CCTV and building management systems.
- With the digital dashboard, authorised personnel have full visibility of the locks on the system. Along with the ability to monitor, audit and programme locks remotely.

A digital dashboard acts as a central management system for all locks on the system as well as displaying scheduled access for service and maintenance personnel.
