

# Improved service for you and your customers:

## integrated access management on your platform – thanks to exivo

No matter which platform you use for your services: from B&B booking platforms to websites for managing shared premises or a solution for reserving rooms and resources – exivo helps you to automate assigning access rights with a minimum of effort. Linking access to your services generates appreciable added value for you and your customers. The exivo access solution in the cloud and comprehensive "application programming interface" (API) lets you quickly and easily transfer access rights via diverse means of communication.

### Benefits at a glance

- Offer your customers additional services
- Optimise your processes
- Save labour and resource costs
- Make the most of your potential
- RESTful API (JSON)
- Easy integration
- Webhook for receiving messages

### When is integration worth your while?

- If you use a platform or mobile application to interact with your customers
- If you need customised solutions and functions
- If access to rooms is going to be an integral part of your service

## Full control with exivo

### **You have full control over your reservations, but how secure is your access?**

exivo puts you in charge and lets you easily integrate access control into your existing platform via API (the interface to application programs).

### **You don't yet have any kind of access solution on your doors?**

If so, don't hesitate any longer. An upgrade to exivo as access solution is worth your while, especially in terms of cost and flexibility.

### **You save labour costs**

You used to never be able to estimate exactly when customers were going to use their tennis court, gym or holiday home. So you needed staff for both the administration and granting access rights. With exivo as your access solution, now you don't need staff any longer, for thanks to online rights assignment, you can grant your guests access via mobile phone or PIN code.

## Features

### **exivo – use it anywhere**

The services industry is highly diversified – and so are exivo's deployment possibilities – especially when it comes to linking in to existing platforms.

### **Enhance your customer experience**

exivo eliminates the need for time-consuming reservation processes or advance notifications and fixing dates for handing over access media like keys. Straightforward reservation and the direct assignment of rights leave your customers free to do as they please and let you enhance the flexibility of your services to customers.

### **Make the most of your potential**

Besides staff for administration and letting customers into your premises, now you don't have to put on lights or heating on the off chance guests will arrive. Thanks to online reservation via a platform and linkage to the exivo access control system now you know exactly when resources/rooms etc. are required and can switch on lights and heating accordingly. This is a special benefit for 24/7 services.

## Application examples of exivo integration in reservation platforms:

### Residential complexes

- As soon as residents reserve a room on the platform they are immediately assigned the rights for it. Extras like "function rooms" can also be integrated into the system to completely eliminate any manual administration.

### Sports facilities

- **Tennis courts**  
Your guests may want to play on court very early or very late. Reservation and transfer of the access rights runs smoothly via exivo with no need for staff presence.
- **Gyms**  
Your guests can come and go as they like. Very easily – thanks to the assignment of access rights.
- **Swimming pools**  
If there are no bookings, you will be able to see this and thus save heating costs and other resources.

### Bed & Breakfast

- Only guests who have actually reserved and paid for your service can enter the relevant rooms.

### Shared offices

- Controlling access to shared premises is especially important in view of the new European General Data Protection Regulation.

### Schools

- Security comes first where children are involved. exivo lets you exactly define access rights and thus protect rooms from unauthorised access.

### You can also add services

You can include other areas besides access to your tennis courts/gym/hotel. For instance, in your gym/hotel you can manage controlled access to the sauna via your platform and thus offer it as an extra service.

### Access solution in the cloud – no longer a dream

Our solutions have already proved their salt in practice. Providers like [eTennis](#) or [SportsNow](#) already use exivo to improve both security and the customer experience and operate more profitably.

### Automated processes like access control leave you with

More time to spend on your core processes and more revenue thanks to the efficient use of your resources.
