

Hands Free Foot Plate

Solution for Hygienic Entry

It is impossible to avoid public places. However, it is possible to avoid germs when you visit a high traffic area like an Educational institution / Corporate / Shopping mall / Complex / Hospital, etc. The door handles in these places need to be pushed / pulled to open the door. They might have encountered germs / bacteria / virus from the previous users, and to prevent cross contamination it is better not to touch them.

dormakaba's hands free door opener allows you to open the door by just stepping on it and pulling / pushing with the leg. This simple solution helps you avoid direct skin contact with the door and gives you seamless access through the door. Further, even if your hands are full, you can still open the door by stepping on the door opener.

	Article Number
Hands Free Foot plate (One Side), SSS	9126073

Features
