

Elbow Door Opener

Solution for Hygienic Entry

Eliminate the need to touch or grab the handles of doors which helps in reducing the spread of germs / viruses and prevent cross-contamination. Certain doors needs to be latched. For example a fire door requires to be positively latched. Generally a lever handle is used to disengage the latch and that is where touch is required. This direct touch can be eliminated and we could use our Arm / Elbow to operate the door. This solution does not require the need to replace handle nor required to drill any holes. The Arm / Elbow openers can be used to operate the latch and will give easy Ingress and Egress.

	Article Number
Elbow Door Opener	9126074

Features

- Contour design
- Safe to operate
- Non handed for ease of operation
- Suitable for handles with a diameter of 19mm
- Ease of installation
