## OFFICE Mundus with c-lever compact

### Clarity in form and function

A room is there to be lived in: it must all match one another – basic shapes, colours and surface finishes. Therefore, to match the MUNDUS patch fittings, there is now the corresponding lock in the OFFICE Mundus Design. Everything together follows the XEA design principle. It stands for true freedom of choice in a systematic colour shade spectrum – from light to dark, matt, structured or high-gloss, from integrative to accentuating, with surface finishes of stainless steel or aluminium. In every installation variant, there arises a harmonic unity. In XEA design, complete solutions in the architecture are possible in every detail. XEA combines the product and corporate worlds of dormakaba into one uniform design, whose content and appearance speak a language that is recognisable at first glance. A new clarity in form and function.

### The ideal complement in design and function

The c-lever compact ideally complements the mechanical and unlockable lock for toughened glass doors OFFICE Mundus and is simply screwed to the rose fixing of the door handle. The combination thus offers a modern and intelligent solution for digital access control, e.g. in office buildings, public authorities or in the retail sector. The c-lever compact electronic fitting, on the other hand, offers attractive, award-winning design combined with a high degree of functional diversity. User management can be carried out by means of card programming on the device itself or conveniently via the evolvo Smart App.

Please ask your contact person at dormakaba.

## OFFICE Mundus – at a glance

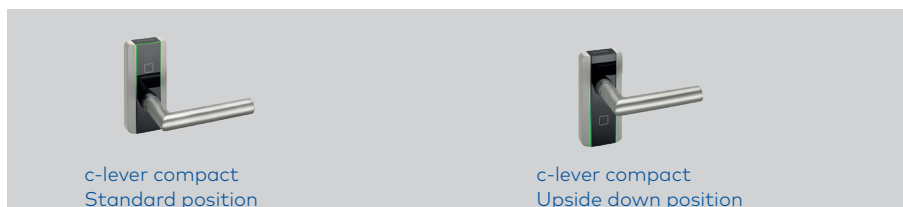

- Modern design coordinated as per the XEA design principles of dormakaba
- Suitable for MUNDUS series of patch fittings and OFFICE hinges
- Uniform design in the toughened glass assembly
- Wide range of finishes and colours
- Clear shape with straight edges and rounded angles

### Technical features:

- OFFICE Mundus is available in the following lock types:
  - non-locking latch, prepared for lever handle with follower or lever handle with rose
  - europrofile cylinder prepared, developed for lever handle with follower or lever handle with rose (Hint: the c-lever compact requires a lock that is prepared for handles with roses)
- Strike box
- Suitable for glass thickness of 8 and 10 mm
- Adapter sets optionally available, for the use of glasses > 10 mm in thickness
- Simple glass preparation and secure fixing
- Locks comply to the current DIN EN 12209
- Successfully tested by a neutral testing institute with 500,000 latch and 100,000 locking bolt operating cycles
- Lock insert with low-noise "whisper" functionality as standard
- Adjustable lever handle follower

### Sophisticated design

Thanks to its exceptional design, the c-lever compact can also be installed upside down: a great advantage for doors where space is limited, such as glass doors or doors where the cylinder is located above the handle.
