

dormakaba PORTEO

Opening and closing made easy

The PORTEO is the convenient way to open doors with minimal effort and close them securely. Automatic, quiet, reliable and affordable. Makes everyday life a whole lot simpler for everyone.

Impressive design and technology

Its compact, elegant design compels as much as its high-quality technology. Operation is very simple. The PORTEO can be flexibly adapted to individual needs. Another advantage is that all this convenience and security are ready to plug in and easy to install thanks to the "plug & go" function.

Versatile areas of application

The PORTEO is the epitome of versatility. It offers numerous functions for different spatial requirements and many different types of doors. This makes the PORTEO suitable for both private use as well as other areas of application.

Certified security

The PORTEO is a convenient door system developed with the latest security requirements in mind. Certifications according to severe testing standards prove its high level of security.

Advantages listed point by point

- Easy opening and closing of swing doors up to a width of 1,100 mm with a door leaf weight of up to 100 kg
- One design for all four installation options: on the pull and push side in lintel or door leaf mounting
- Compact dimensions 60 x 530 x 80 mm (H x W x D), particularly suited for use in narrow profiles and conventional profile systems
- Extremely low projection of only 60 mm
- Low noise driving performance
- Simple installation thanks to "plug & go" function, ready to plug in with standard mounting plate
- Quiet operation
- Certified by the German Society for Gerontechnology (GGT) with a "Good" rating.

PORTEO – functions

Power assist

Motor-assisted manual opening.

The door is closed automatically and controlled according to the individually preset hold-open time.

Push & go

After manually opening to 3°, the automatic opening mechanism is triggered.

PORTEO opens and closes the door automatically after the preset hold-open time.

Automatic mode

Automatic door opening and closing in combination with electric strike plates and external actuators, e.g. hand transmitter BRC-H. As soon as the impulse has been sent, the door opens upon release by the electric strike plate and closes automatically after the preset hold-open time.

Permanent Open

With this function, the door can be held open permanently. The door is opened and kept in this position until a new signal is sent, either by actuating the program switch (door lock must be unlocked) or by pushing a manual release switch twice (flip-flop function).
