ENVIRONMENTAL PRODUCT DECLARATION

8000 AND 9000 SERIES EXITS

The 8000 and 9000 series exit devices deliver reliable and secure solutions for any security needs.

DORMA IS THE TRUSTED GLOBAL PARTNER FOR PREMIUM ACCESS SOLUTIONS & SERVICES ENABLING BETTER BUILDINGS

With over 100 years of experience, the company offers comprehensive solutions covering all facets of your opening – from locks, closers, and floor springs to automatic door systems and access control components. DORMA also supplies horizontal sliding wall systems, revolving doors and glass wall systems.

DORMA maintains major production plants in Europe, Singapore, Malaysia, China, and North and South America.

Our commitment to a sustainable future

We are committed to sustainable development as one of our key business objectives. DORMA's aim is to ensure energy-saving and resource-conserving production, to maintain a high recycled content ratio and to provide products with a long service life. With expert advice, innovative products and international service coverage we are able to make significant contributions to energy efficiency and to drive cost savings derived from sustainable building concepts. Through our involvement in national organizations around the world, we at DORMA support the idea of the World Green Building Council.

Institut Bauen und Umwelt e.V.

Registered under the scope of mutual recognition between UL Environment and Institut Bauen und Umwelt e.V.

ENVIRONMENTAL PRODUCT DECLARATION

DORMA Deutschland GmbH
8000 and 9000 Series
Exits

According to EN 15804 and ISO 14025
Dual Recognition by UL Environment and Institut Bauen und Umwelt e.V.

This declaration is an environmental product declaration (EPD) in accordance with ISO 14025. EPDs rely on Life Cycle Assessment (LCA) to provide information on a number of environmental impacts of products over their life cycle. Exclusions: EPDs do not indicate that any environmental or social performance benchmarks are met, and there may be impacts that they do not encompass. LCAs do not typically address the site-specific environmental impacts of raw material extraction, nor are they meant to assess human health toxicity. EPDs can complement but cannot replace tools and certifications that are designed to address these impacts and/or set performance thresholds – e.g. Type 1 certifications, health assessments and declarations, environmental impact assessments, etc. Accuracy of Results: EPDs regularly rely on estimations of impacts, and the level of accuracy in estimation of effect differs for any particular product line and reported impact. Comparability: EPDs are not comparative assertions and are either not comparable or have limited comparability when they cover different life cycle stages, are based on different product category rules or are missing relevant environmental impacts. EPDs from different programs may not be comparable.
By using this EPD, the user agrees to the UL ENVIRONMENT SUSTAINABLE PRODUCT GUIDE TERMS OF USE (http://productguide.ulenvironment.com/TermsandConditions.aspx), where this EPD is listed.

Product

Product description
DORMA's 8000 and 9000 Series exit devices reliably secure egress doors in compliance with applicable fire/life safety code requirements. The touchbar, rail assembly and integral parts are constructed of solid steel and are designed to minimize catch hazards.

These exit device series offer a selection of architectural finishes and can include a full complement of options, including alarmed exit, delayed egress exit, electric latch retraction, and device monitoring.

Application
The 8000 and 9000 Series are intended for use in schools, universities, and other institutional or commercial buildings as a fire or panic exit.

For paired doors where a full-width opening is only occasionally required, removable mullions are used. Doors are fitted with rim exit devices and normally function as single doors. Steel and aluminum mullions are available in 8' or 10' lengths.

Technical Data
DORMA's exit devices are available in different lengths to accommodate varying door widths. The stile touchbar, rail, and cover are fabricated in heavy gauge solid wrought materials and each exit is outfitted with deadlocking latch bolts. The standard trim for all devices is free wheeling and vandal-resistant.

Certifications include /ANSI A156.3/ for Grade 1, /ANSI 117.1/, and /UL 10C/. The devices also comply with /NFPA 101/ and /NFPA 80/ (as applicable).

Base materials / Ancillary materials

Name	Value	Unit
Steel	77	%
Brass	18	%
Aluminum	4	%
Plastic	1	%

Reference service life
No use stage modules are reported; as such, declaration of the reference service life (RSL) is voluntary. The RSL is not reported for the 8000 or 9000 Series exits.

LCA: Calculation rules

Declared Unit
The declared unit of this analysis is one surface applied exit.

Declared unit

Name	Value	Unit
Declared unit (1 exit)	1	1 piece/product
Mass of system (without packaging)	7.7	kg
Conversion factor to 1 kg	0.13	-

System boundary
Type of EPD: cradle-to-gate - with options. The following modules were considered in the analysis:

Product stage:
- Raw material supply (A1)
- Inbound transport (A2)
- Manufacturing (A3)

Construction process stage:
- Distribution (A4)
- Installation (A5)

End-of-life stage:
- Disposal (C4)

Beyond system boundaries:
- Reuse, recovery, recycling potential (D)

Comparability
Basically, a comparison or an evaluation of EPD data is only possible if all the data sets to be compared were created according to /EN 15804/ and the building context, respectively the product-specific characteristics of performance, are taken into account.

LCA: Scenarios and additional technical information

Additional information is provided for declared modules, including A4, A5, C4, and D. In order to represent DORMA's global distribution network, a sales-weighted average is used to model transport to the building site. The table for Module A4 shows both weighted average transportation distance (given regional exit sales), which is used in the analysis, along with the variation in that distance. Additionally, estimated global average recycling rates are used to represent product disposal.

Transport to the building site (A4)

Name	Value	Unit
Litres of fuel (truck)	31	l/100km
Fuel economy (truck)	7.6	mpg
Transport distance (SI)	2400 - 7700	km
Average transport distance (SI)	3,830	km
Transport distance (imperial)	1,500 - 14,200	mi
Average transport distance (imperial)	2,380	mi
Capacity utilisation (including empty runs)	85	%

Installation into the building (A5)

Name	Value	Unit
Output substances following waste treatment on site (packaging)	3.1	kg

End of life (C1-C4)

Name	Value	Unit
Recycling	6.5	kg
Landfilling	1.2	kg

Reuse, recovery and/or recycling potentials (D), relevant scenario information

Name	Value	Unit
Recycling rate, aluminum	60	%
Recycling rate, brass	52	%
Recycling rate, paper	90	%
Recycling rate, plastics	14	%
Recycling rate, steel	88	%

LCA: Results

The table below summarizes which modules are declared (as indicated by an "X"), and which are not declared (as indicated with "MND"). Environmental performance results are shown for one (1) exit device.

DESCRIPTION OF THE SYSTEM BOUNDARY (X = INCLUDED IN LCA; MND = MODULE NOT DECLARED)

PRODUCT STAGE			CONSTRUCTION PROCESS STAGE		USE STAGE							END OF LIFE STAGE				BENEFITS AND LOADS BEYOND THE SYSTEM BOUNDARYS
Raw material supply	Transport	Manufacturing	Transport from the gate to the site	Assembly	Use	Maintenance	Repair	Replacement	Refurbishment	Operational energy use	Operational water use	De-construction demolition	Transport	Waste processing	Disposal	Reuse- Recovery- Recycling- potential
A1	A2	A3	A4	A5	B1	B2	B3	B4	B5	B6	B7	C1	C2	C3	C4	D
X	X	X	X	X	MND	MND	MND	MND	MND	MND	MND	MND	MND	MND	X	X

RESULTS OF THE LCA - ENVIRONMENTAL IMPACT: 1 exit (7.7kg)*

CML-IA version 4.2, released april 2013

Exported thermal energy	[MJ]	0.000E+0	0.000E+0	0.000E+0	0.000E+0	0.000E+0

* 1kg = 2.204 lbs.

Exit environmental impacts are dominated by the product stage (A1-A3) for all impact categories. The production of raw materials such as steel, in particular, are key drivers of environmental performance. The one exception is ozone depletion potential, for which Module D is negative and represents a significant portion of environmental impact. This is due to the high content of stainless steel in the product; both primary and secondary routes to producing stainless steel lead to high ozone-depleting emissions, although the credit given for primary steel production outweighs any burdens from recycling scrap stainless steel.

Compared to the product stage, distribution accounts for a small fraction of exit environmental impact. Distribution is modeled assuming a sales-weighted average based on the countries and regions in which the exit is sold.

Finished products are shipped from DORMA's facility in Steelville, IL to various locations in Europe and the Americas. While the results represent DORMA's specific situation as of 2013, they can be reevaluated for a specific country or region.

At the end-of-life, DORMA's exits are modeled as being recycled. A portion of each material type is recovered and the remainder landfilled. In this case, proxy data are used as often, global average or even regional specific data are not available. Waste disposal (Module C4) is consistently a minor contributor to environmental impact so dataset choice is not anticipated to affect conclusions.
