The fail secure locking mechanism shall only be installed where allowed by the local authority having jurisdiction and shall not impair the operation of the panic hardware or intended operation of the emergency exit.

Wiring Instructions

Use the appropriate wire harness supplied.
- 12V for 12VDC & 12-24VAC
- 24V for 24VDC only

Attach the red wire to (+) positive of the power supply. Attach the black wire to the (–) negative of the power supply. If using AC power, polarity is not observed.

NOTE: If a suppression diode is required for access control, observe proper polarity.

Latch Monitor Wires
- Black = Common (C)
- Blue  = Normally Close (NC)
- Orange = Normally Open (NO)

Wiring the ES96F Series Electric Strike

Model ES96F must be connected to a compatible UL Listed Access Control Power Supply.
1. Mount the strike onto the frame without the faceplate. Tighten the mounting screws just enough to hold the strike in place; you may need to slide it up-down for adjustment.

Adjust Deadbolt Bracket:
First, extend the deadbolt and move the door so that deadbolt touches the keeper.
Mark deadbolt limit lines on keeper.
Then, open the door and retract the deadbolt. Adjust the deadbolt bracket position so that it captures deadbolt limit lines marked on keeper. Move the strike up-down if needed.

Adjust Guardbolt Bracket:
First, move the door towards the strike so that the guardbolt touches the keeper.
Mark guardbolt limit lines on keeper.
Then, open the door. Adjust the guardbolt bracket so that it captures guardbolt limit lines marked on keeper.
Adjust Latch Monitor Module Accessory:
First, move the door towards the strike so that the latch touches the keeper.
Mark latch limit lines on keeper.
Then, open the door. Mount the Latch Monitor Module on the strike housing so that it is between the latch limit lines marked on keeper.

2. Mark strike position on the frame.

3. Peel the adhesive backing from tape on the back side of the appropriate faceplate. Remove the strike mounting screws. Hold the strike in position as marked on frame. Carefully position the faceplate onto the strike and secure to the frame.
**Horizontal Adjustment:** If there is play in the door when closed; the keeper shims may be used to minimize play.

**Trim Plate:** This can be used in case the frame cutout is bigger than required.

**Deadbolt Plug:** If the lock set doesn’t have a deadbolt, then replace deadbolt bracket with deadbolt plug.
