for individual clear opening width 1100mm - 1350mm

## AGILE 150 DORMOTION

The system that ensures safe standstill even when the doors are flung open or closed at speed. The door comes to a gentle stop where it is securely held without any uncontrolled recoil or fade-back.

A cushioning spring mechanism absorbs the momentum of the sliding door every time as it reaches the end of its travel path, guiding it automatically into its open or closed end position where it is reliably

held. The entire mechanism is discreetly concealed within the track rail and a glass recess. All AGILE 150 DORMOTION systems can be used for door leafs with a maximum weight of 150 kg.

AGILE 150 DORMOTION is also available in synchronized double sliding doors.
