Anti-pinch door system

DORMA BEYOND

Pinch-free and easy action

Characterized by its systematic design and clear styling lines, DORMA BEYOND enables you to build frameless swing doors into tempered glass assemblies and wall opening.

Whether your application is residential or commercial, modern or traditional, this new system is the elegant, safe operating solution.

The patented DORMA BEYOND swing door system locates its pivot point centrally in the glass axis and close to the glass edge, ensuring

safety and security. This feature prevents the risk of trapped fingers between the fixed panel and swinging glass panels.

The short pivot rod system provides a versatile solution regardless of the door dimensions.

The continuous pivot rod system offers complete freedom from the risk of trapped fingers. By locating the pivot point of the swing door right at the glass edge and providing a radiused profile, the continuous pivot rod eliminates pinch hazards.

For floor mounting single-acting and double-acting doors, the DORMA BTS floor closer offers a convenient alternative to the floor pivot. In this case, DORMA recommends a glass sidelite because the pivot point position requires the closers to be buried under the adjacent wall.

The top connection depends on the type of unit. When incorporating the glass door into a tempered glass assembly, a transom pivot fitting forms the top connection. In the case of doors in wall openings, a top

No tears here—minimal, pinch-free gaps even with the short pivot rod.
