

## dormakaba 96 00 terminal

### Time registration in a compact design

Are you looking for a secure and uncomplicated time registration system?

With the 96 00 terminal, we can offer a flexible entry-level solution, which you can easily expand at a later date.

As well as time registration, the 96 00 terminal also offers a door control option, modern employee communication and the use of your own app.

Protection type IP65 means that the terminal, with its housing and impact-resistant glass front, is protected against dust and water – and therefore especially durable.

The user interface is freely configurable and can be designed with a customised appearance as well as company-specific content and applications.

The range of functions can be expanded according to your requirements with additional options such as CardLink. This means that you can easily connect the digital door components of a standalone access control system with an online access control system.

#### **Choose the device from the various different option packages that is right for you:**

The 96 00 terminal is available in the option packages 96 20, 96 40 and 96 60 (features on the back). This selection offers you the possibility of individually adjusting your device to your requirements.

#### **Advantages at a glance**

- Bright 4" touchscreen
- Protection type IP65 for reliable protection against dust and water
- Robust housing and glass front
- Customisable user interface
- Integration of apps
- Door control for simple access control
- 1-click installation to help you put it into operation quickly and easily
- CardLink function for easy integration of offline door components
- Power over Ethernet (PoE)
- Integrated speaker
