

Community™

Access Management Software

Overview

Community is the next generation access management software solution specifically developed for multihousing operations. Community empowers property managers to intuitively authenticate and manage authorization throughout the entire property providing security, convenience and operational efficiency.

Flexible Deployment

Community offers web-based access from a desktop computer, laptop or mobile device while on the property's network. Property configuration and access management of residents, staff and vendors can be programmed remotely, at any time, 24/7.

Open Architecture Platform

Integrates with third-party systems and solutions developers for Energy Management, IoT, Resident Portal Apps, and more, Simplify your operations and your resident life.

Convenient Mobile Access for Residents

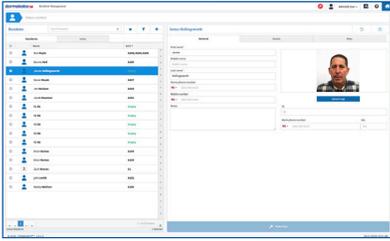

Our multiplatform solution offers the convenience of both RFID credential and mobile access for a seamless technology experience with no need for additional software. Our key delivery platform allows residents the option of using their smart device for entry to all-access points. Our key delivery platform issues and authenticates mobile credentials through BlueSky, our mobile access app.

Applications

- Compatible with dormakaba RFID electronic locks
- Suitable for small to large-scale multi-site properties
- SR Series, Quantum RFID RCU/ECU readers and multi-floor controller.

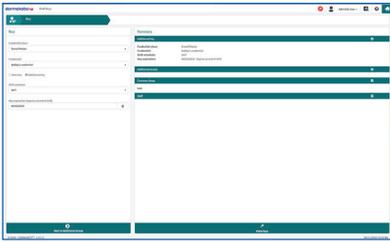

Features

- Mobile credential delivery platform
- Integrates with energy management systems, resident portal apps, and more
- Easily configurable resident and staff roles and rights
- Advanced lock auditing and reporting capabilities
- Supports key encoding either through Community server or client PC that integrates with Community server.

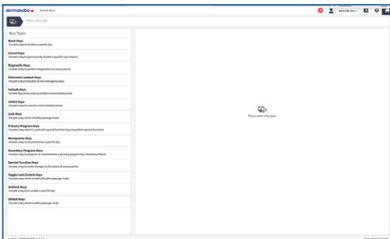

Resident Management

Easily manage your residents and create individual profiles. Intuitively add, edit or delete residents, configure their profiles, add custom access points and issue keys within a few simple clicks. Within each resident profile, property managers can add their mobile phone number, granting them the mobile access. Resident facial images can be uploaded for identity verification.

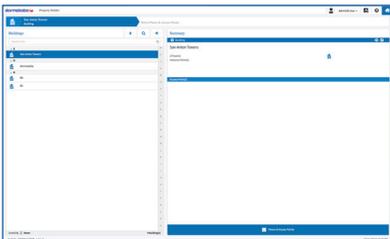

Staff Management

Configure each staff member profile and grant their credentials to common areas and rooms. Community offers a highly customizable key system for staff management access – create a system with no master key, limited master keys or a grand master key to give access to the entire property. Provide restricted access by scheduling auto-unlock and shift schedules for various employees to allow them access during specific times.

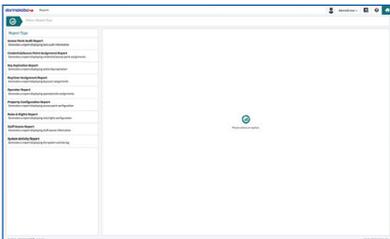

Vendor & Work Order Management

Property managers can grant vendor access through the vendor management workflow. This enables contractors to access specific residences, rooms or areas for a limited number of times or predefined days and times. Each key retains an auditable use record that identifies usage. Choose from a variety of system key options including block, cancel, diagnostic, ELO, failsafe, inhibit, lock, re-sequence, secondary program, unblock, unlock and toggle lock/unlock keys.

Property Builder

Build and modify your property to fit your unique needs at your convenience. Define each building, floor, elevator and access point such as common areas, meeting rooms, laundry rooms and amenities throughout the entire property. Quickly identify each access point type with a distinct color box on the left of the access point.

Auditing & Reporting

The system provides centralized auditing and reporting as an efficient method of managing and controlling access through collecting both software and lock data. View, print or download the current and historical data of your property keys and access points. In the event of a theft or crime, property managers can generate and track lock and user information to quickly identify a breach. Prove who, when and where violations occur at any given point within the property through accurate reporting.
