

# How does the BAZ cylinder work?

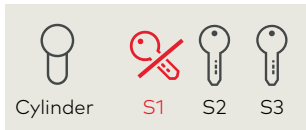

## The 3-in-1 lock cylinder: Change the access permission with a turn of the hand

All keys have access permission

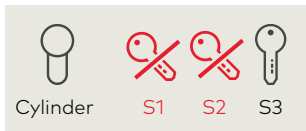

Changeover key U1 is used: Pin combination is modified in the cylinder

S1 had its access permission revoked

Changeover key U2 is used: Pin combination is modified in the cylinder

S1 and S2 no longer have access permission

The cylinder with a changeover function (BAZ) for residential building companies and private consumers

Whether you work for a residential building company or are a private consumer, your security is in your hands.

With the BAZ cylinder from dormakaba you can easily revoke access permission from various keys or a key group using the changeover key. You can carry out this process twice.

So it doesn't matter if you'd like to take away access from a certain person or have lost a key – you respond flexibly without having to replace the lock cylinder.

For a construction project that runs smoothly

From before the start of a construction project until the finished product can be used, craftspeople, architects, building contractors and tenants need access, among others. Depending on the stage of the building process, it used to be that locks would have to be replaced or architectural cylinders would have to be used, until now.

You can install the BAZ cylinder as early as during the construction phase and distribute keys to the craftspeople and future tenants. After the construction phase, the access permissions for the craftspeople's keys or key group can then easily be revoked using the changeover key.

#### Benefits for residential building companies

- Cost reduction
- Reduced need to replace locks
- Less administrative work
- Early availability of locks
- Flexible combination with additional features
- Changein at the cylinder up to two times possible

For a secure home

Whether it's because of a hectic day or maybe your child not paying attention: keys often go missing. The result is a security risk to your home and the next logical step is replacing the locks.

For this case, the BAZ cylinder from dormakaba provides a quick solution. Thanks to the changeover key, you can disable the access permissions for the lost key group up to two times. This way you hold the security of your property in your own hands and can react quickly if needed, with the slight turn of the hand.

#### Benefits for home owners/flat owners

- Cost reduction
- Reduced need to replace locks
- Ability to react after losing a key
- Control over your locks
- Increased security
- Changein at the cylinder up to two times possible
